MANUFACTURING, TOOLS

30 Free Manufacturing Templates for Excel and Word

by Camilo Tristancho | May 19, 2026

Still using spreadsheets to manage your projects? Revolutionize how you manage your projects with ProjectManager. Plan, track and report with automated tools.

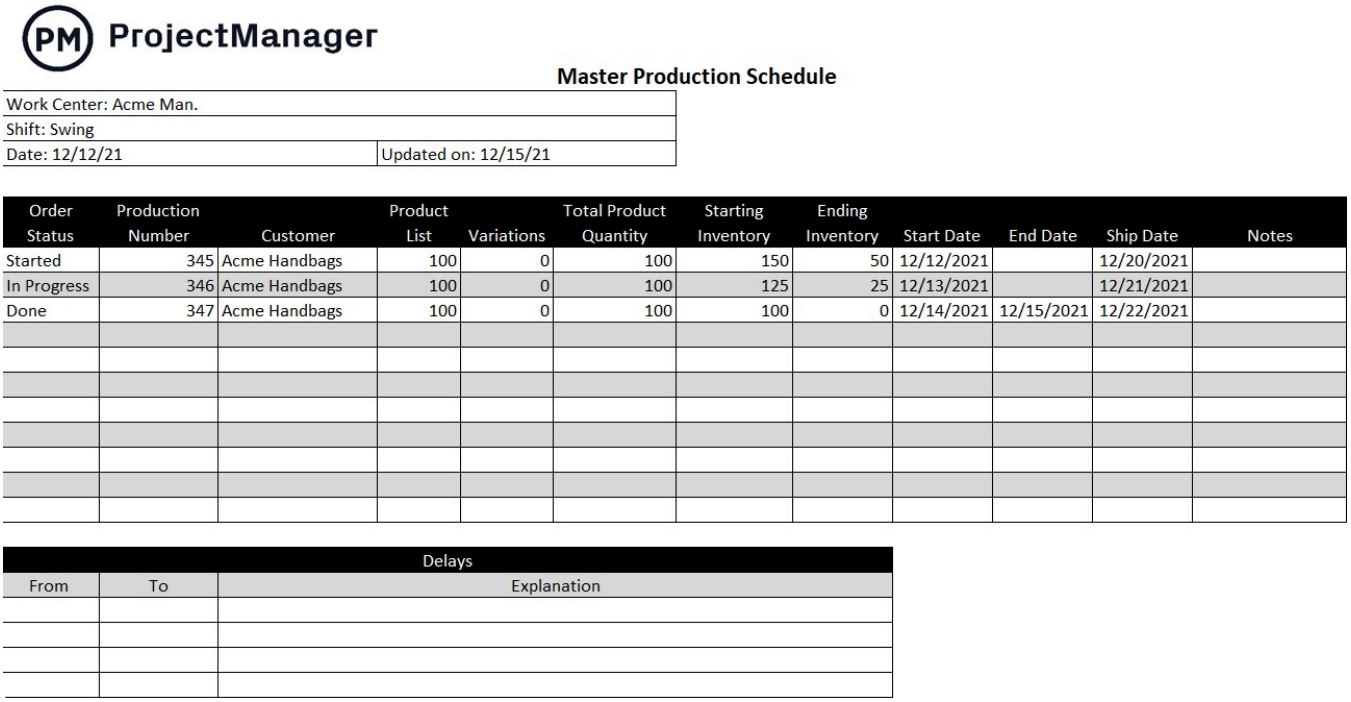

Get started for free

Manufacturing requires a lot of attention to detail and coordinating various moving parts to deliver the final product. To accomplish those goals and meet a tight deadline and an even tighter budget, you need these 30 free manufacturing Excel templates.

ProjectManager has dozens of free templates to download. We curated our template page to select 30 of the essential manufacturing templates for Excel that all manufacturers can benefit from. It doesn't hurt that they're free, either.

Start free trial

A production schedule is how you ensure that you get your product into the hands of your customers on time. But a schedule is similar to keeping a lot of balls in the air. You have to juggle your employees and their work schedule, vendors and suppliers, materials, maintenance of your machinery and more.

ProjectManager

Master Production Schedule

Done	347	Acme Handbags	100	0	100	100	0	12/14/2021	12/15/2021	12/22/2021	

Delays		
From	To	Explanation

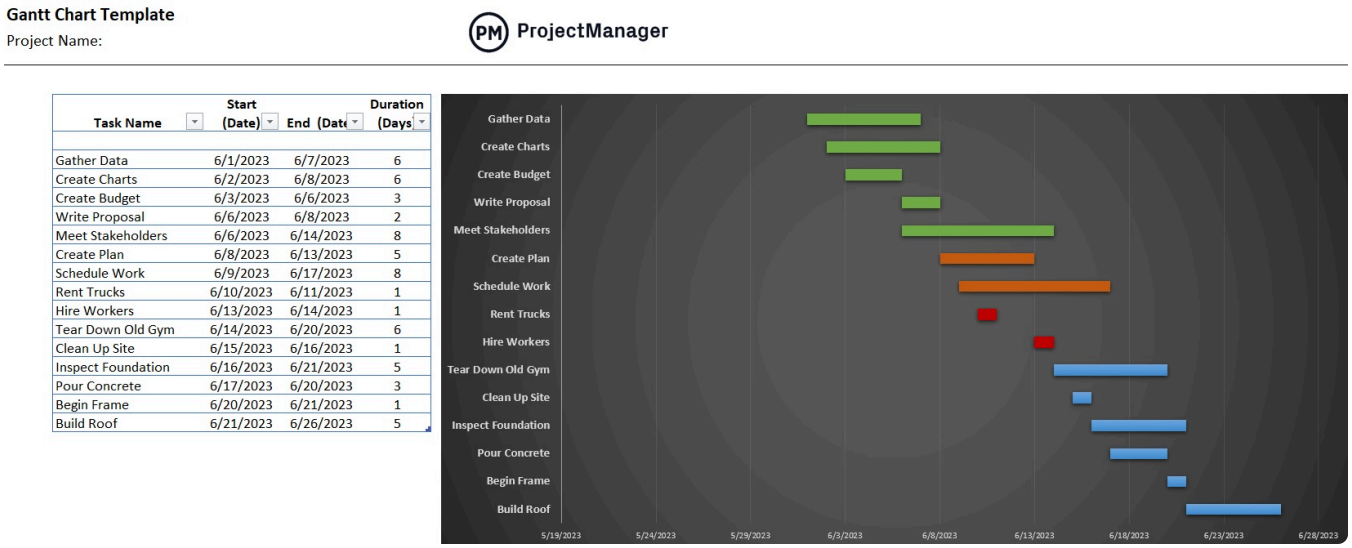

Our free production schedule template for Excel is a gift to manufacturers. It helps put all of the pieces of your manufacturing schedule together in such a way that you're on time. There are places to note the order status, product variations and quantity, but also starting and ending inventory, ship date and much more.

A production schedule template is an essential part of your supply chain management. It helps you manage your resources effectively and even supports the sales team as they know when products will be delivered and available for sale.

2. Gantt Chart Template

Gantt charts have been essential project management tools for over a century. Project managers across all industries have flocked to them to organize tasks and resources. They are best for traditional projects, such as manufacturing, which follow a more waterfall type of methodology.

Start free trial

Begin Frame	6/20/2023	6/21/2023	1
Build Roof	6/21/2023	6/26/2023	5

Our free Gantt chart template for Excel helps you organize all the tasks in your manufacturing cycle. It captures the start date, end date and duration. But more than that, it then translates those columns of numbers into a visual timeline that you can color code to make it easy to see the different stages of your manufacturing process.

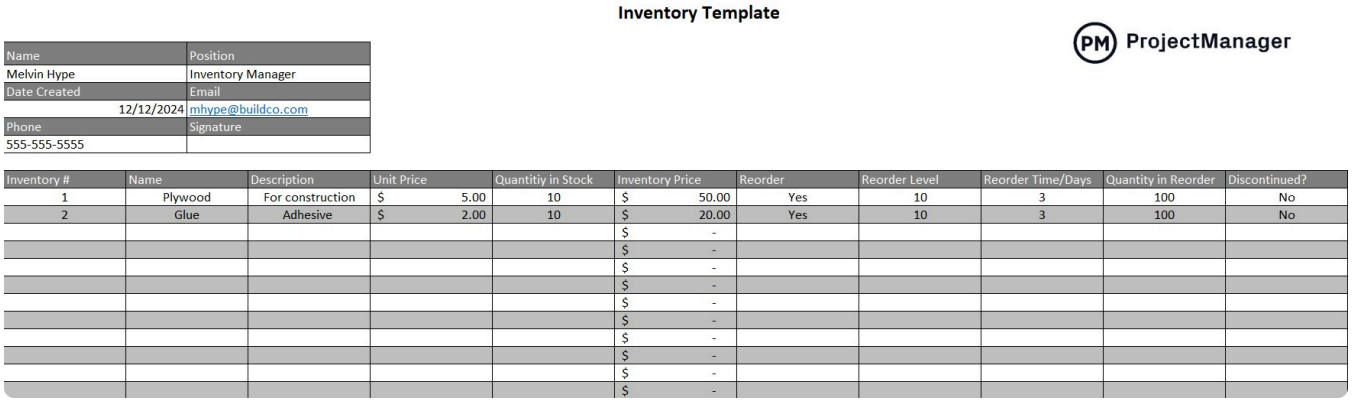

The Gantt chart is the cornerstone of any project schedule. You can share the Gantt chart with stakeholders so they have a picture of the manufacturing process. If there are changes, you can input them manually and the timeline adjusts accordingly.

ProjectManager's Gantt Chart does so much more than an Excel template. Rather than manually creating and adjusting each part of the Gantt, simply input your task details and the Gantt chart populates in minutes. As scheduling changes pop up, simply drag and drop and all the dependencies will automatically update. Plus, you can track costs, progress and workload across your team.

Start free trial

Managing your inventory is key to manufacturing. If you don't know your stock, you're not going to be able to build your products without costly delays. To keep track of what's in your warehouse so you can better plan your manufacturing, you need to know your inventory.

Inventory Template

ProjectManager

Name	Position
Melvin Hype	Inventory Manager
Date Created	Email
12/12/2024	mhype@buildco.com
Phone	Signature
555-555-5555	

Inventory #	Name	Description	Unit Price	Quantitiy in Stock	Inventory Price	Reorder	Reorder Level	Reorder Time/Days	Quantity in Reorder	Discontinued?
1	Plywood	For construction	$ 5.00	10	$ 50.00	Yes	10	3	100	No
2	Glue	Adhesive	$ 2.00	10	$ 20.00	Yes	10	3	100	No
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					
					$ -					

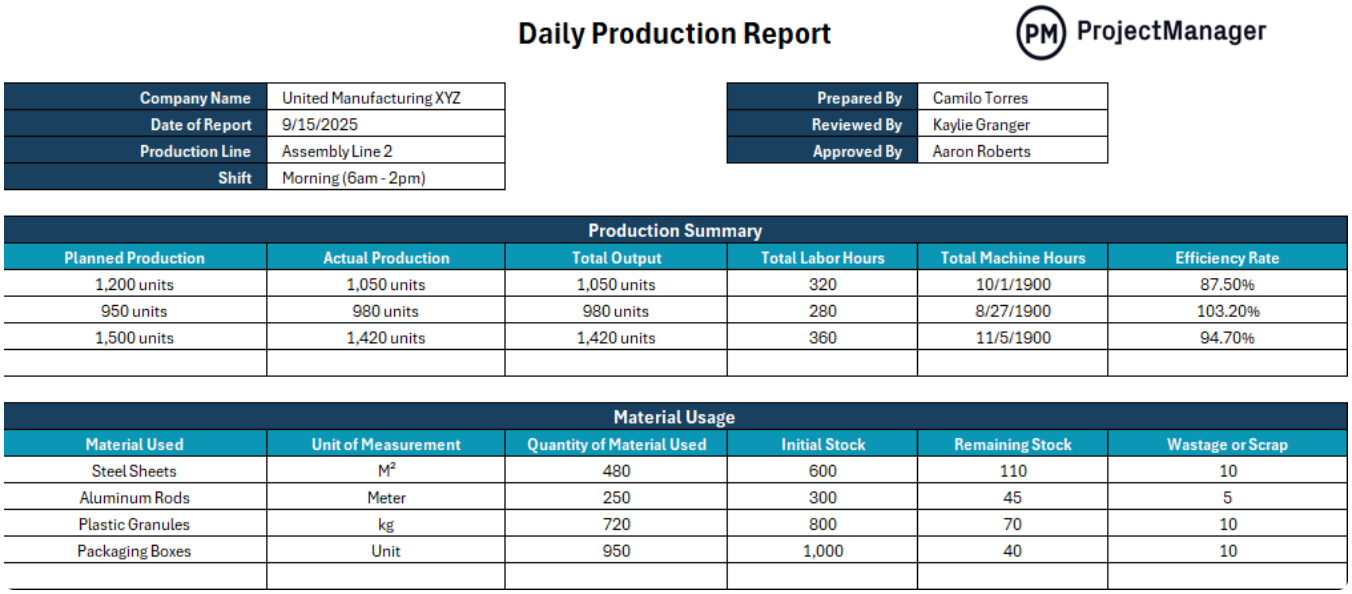

That's where this manufacturing Excel template comes in. It's a customizable spreadsheet with columns to capture the inventory number, name and description of the material or part, including unit price, quantity and whether it's in stock.

There's even a pulldown menu to note whether you have to reorder the item. The reorder level column allows you to avoid the stock falling so low that you can't continue the manufacturing process and gives you time to reorder and restock before anything is delayed.

4. Daily Production Report Template

A daily production report provides a snapshot of everything that occurred on a manufacturing line during a single shift. It summarizes how many units were planned versus how many were actually produced, capturing efficiency and resource usage in real time. Supervisors use this document to track worker attendance, machine availability and any disruptions that slow workflow. The insights gained help managers improve productivity, maintain quality standards and ensure the next shift begins without confusion.

Daily Production Report

ProjectManager

Company Name	United Manufacturing XYZ
Date of Report	9/15/2025
Production Line	Assembly Line 2
Shift	Morning (6am - 2pm)

Prepared By	Camilo Torres
Reviewed By	Kaylie Granger
Approved By	Aaron Roberts

Production Summary

Planned Production	Actual Production	Total Output	Total Labor Hours	Total Machine Hours	Efficiency Rate
1,200 units	1,050 units	1,050 units	320	10/1/1900	87.50%
950 units	980 units	980 units	280	8/27/1900	103.20%
1,500 units	1,420 units	1,420 units	360	11/5/1900	94.70%

Material Usage

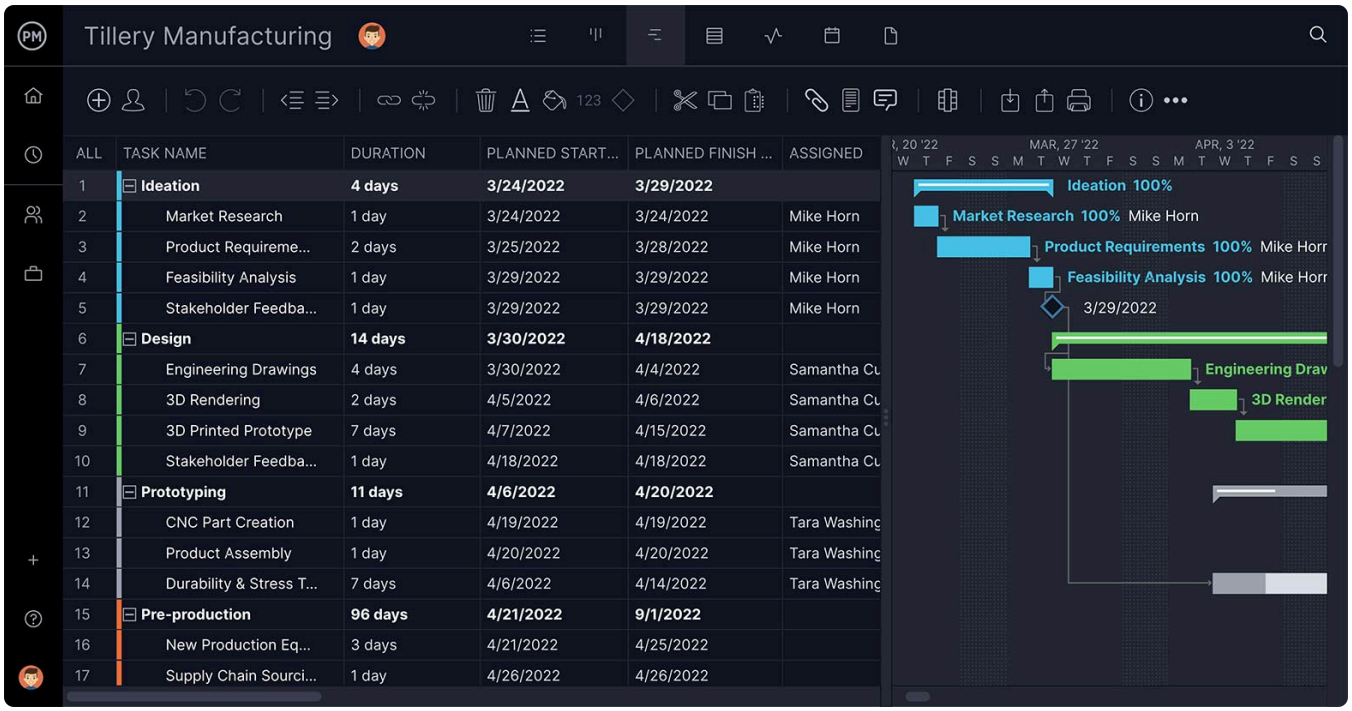

Material Used	Unit of Measurement	Quantity of Material Used	Initial Stock	Remaining Stock	Wastage or Scrap
Steel Sheets	M^2	480	600	110	10
Aluminum Rods	Meter	250	300	45	5
Plastic Granules	kg	720	800	70	10
Packaging Boxes	Unit	950	1,000	40	10

Our daily production report template for Excel organizes data from multiple factory functions into one clear report. Production output is compared against goals to highlight performance strengths or inefficiencies. Material consumption and remaining stock levels are documented to prevent shortages that could halt assembly. Machine downtime, defect rates and safety metrics are also included, giving decision-makers a holistic view of operations. Space for shift notes and improvement instructions ensures seamless coordination between teams and supports continuous manufacturing progress.

5. Product Development Template

Driving new ideas to market requires a process that blends creativity with disciplined execution. Product development brings together cross-functional teams to research customer needs, design solutions, test prototypes and refine features based on real-world feedback. By following a structured approach, manufacturers reduce the risk of costly redesigns, accelerate launch timelines and ensure the final product meets market expectations. Transparent communication and data-driven decisions keep innovation aligned with business goals from concept through production.

Start free trial

Free Product Development template. Download now

Our free product development template is the ideal tool for making a manufacturing project plan. Break your plan down into phases like ideation, design and prototyping: then link dependencies to keep everything moving as your schedule changes.

Once you open the template, you'll find a spreadsheet on the left side, where you'll enter task details like due dates, duration, task owner and estimated costs. You can then break down your tasks further into subtasks to keep everything organized. This template will give you an idea how manufacturing project management software can help you deliver new products faster to the market.

6. Bill of Materials Template

A bill of materials describes the materials, assemblies, parts and components needed to make a product. Bills of materials are primarily used to train manufacturing employees on how to assemble products, but they might also be sent to external parties when outsourcing manufacturing processes.

7. Material Requisition Form Template

To keep production moving without interruption, manufacturing teams need a reliable way to request raw materials, components and tools. A material requisition form captures exactly what is required, when it should arrive and where it will be used on the factory shop floor. By replacing informal requests with accurate documentation, the process reduces bottlenecks, strengthens inventory control and ensures procurement delivers the right materials on time while improving traceability across the supply chain.

units, quantities, due dates and vendor preferences. Priority labels help planners allocate budget and warehouse space effectively. Clear delivery instructions ensure materials arrive at the correct workstation, allowing production teams to stay focused on throughput and quality.

8. Stock Register Template

A stock register is a detailed record of all materials and goods moving in and out of a manufacturing warehouse. It tracks opening balances, purchases, issues, reorder levels and current stock on hand, ensuring teams always know what is available to support production. By maintaining up-to-date quantities and values, manufacturers avoid costly stockouts, reduce excess inventory and safeguard material traceability across the entire supply chain.

Stock Register Format

This stock register template gives procurement, inventory and production teams a clear overview of material flow. It includes structured sections for item details such as SKU, category, unit of measure and reorder thresholds, plus transactional logs that capture supplier deliveries and internal issues. Calculated running totals show real-time availability, while cost fields strengthen financial oversight. With accurate records in one place, businesses can monitor usage patterns, schedule replenishments proactively and maintain uninterrupted manufacturing operations.

9. Supplier Evaluation Form Template

When procurement teams assess suppliers with consistent, structured criteria, they gain a clearer view of vendor performance and reliability. A supplier evaluation form brings

Start free trial

strengthens supplier relationships and helps ensure that only the most dependable partners continue supporting production needs across the manufacturing supply chain.

Our supplier evaluation form template for Excel is designed for teams who routinely compare multiple suppliers to determine the best fit for production needs. It centralizes vendor details, certification status and years of experience before scoring their performance in a structured format. Weighted scoring highlights strengths and weaknesses that might otherwise be overlooked. Recommendations at the end help guide future procurement actions, making it easier to prioritize top performers and identify suppliers needing improvement or conditional approval.

10. Resource Plan Template

Resources are what make manufacturing work, and a resource plan is how you organize and manage your resources for greater productivity. Resources can mean equipment, tools and materials. But the most important resource is your employees.

11. Dashboard Template

Just as a car has a dashboard so the driver can see how fast the car is traveling, how much gas is left and more, manufacturing projects need a tool to give teams a view of their work to better manage it. What you get is a high-level view of your manufacturing process whenever you want it.

Start free trial

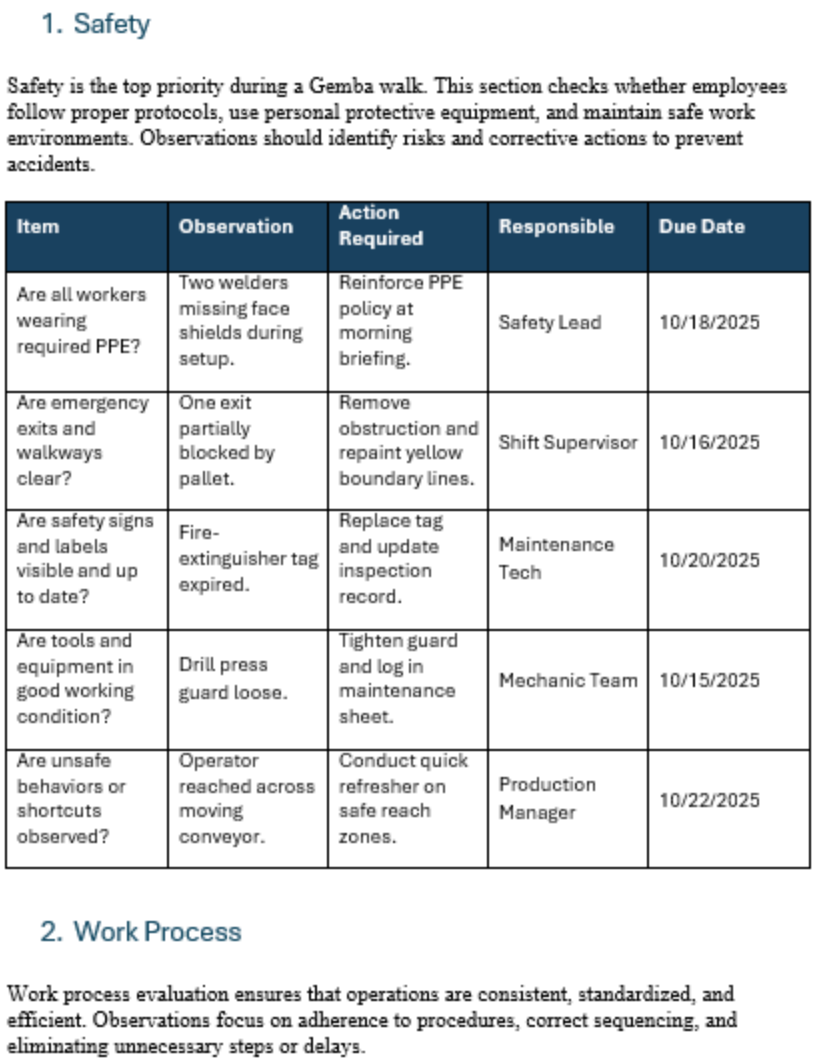

Using our free dashboard template for Excel provides you with four metrics to measure your manufacturing process. You can see the percentage complete of all tasks in your schedule, your team's workload, the length of tasks and even project costs. All of these are displayed in easy-to-read graphs and charts.

This manufacturing Excel template is a free tool that can help you capture anomalies in your production cycle so you can respond to them quickly and avoid costly delays. It's a great tool for any production manager to get a glimpse of the progress and performance of the manufacturing process in one place.

12. Gemba Walk Template

Leaders gain their clearest understanding of manufacturing performance when they step onto the production floor and see work happening in real time. A Gemba walk encourages that direct engagement, allowing supervisors to observe safety practices, workflow efficiency, product quality and how teams collaborate. The focus stays on learning, asking questions and uncovering underlying causes rather than assigning blame. By operating this way, organizations build trust, accelerate improvement and make decisions based on firsthand operational insight.

Start free trial

1. Safety

Safety is the top priority during a Gemba walk. This section checks whether employees follow proper protocols, use personal protective equipment, and maintain safe work environments. Observations should identify risks and corrective actions to prevent accidents.

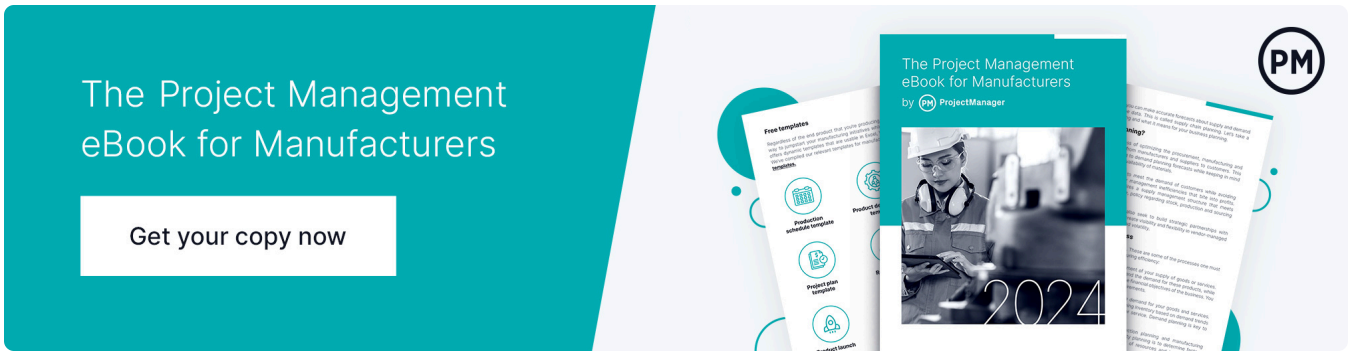

Item	Observation	Action Required	Responsible	Due Date
Are all workers wearing required PPE?	Two welders missing face shields during setup.	Reinforce PPE policy at morning briefing.	Safety Lead	10/18/2025
Are emergency exits and walkways clear?	One exit partially blocked by pallet.	Remove obstruction and repaint yellow boundary lines.	Shift Supervisor	10/16/2025
Are safety signs and labels visible and up to date?	Fire-extinguisher tag expired.	Replace tag and update inspection record.	Maintenance Tech	10/20/2025
Are tools and equipment in good working condition?	Drill press guard loose.	Tighten guard and log in maintenance sheet.	Mechanic Team	10/15/2025
Are unsafe behaviors or shortcuts observed?	Operator reached across moving conveyor.	Conduct quick refresher on safe reach zones.	Production Manager	10/22/2025

2. Work Process

Work process evaluation ensures that operations are consistent, standardized, and efficient. Observations focus on adherence to procedures, correct sequencing, and eliminating unnecessary steps or delays.

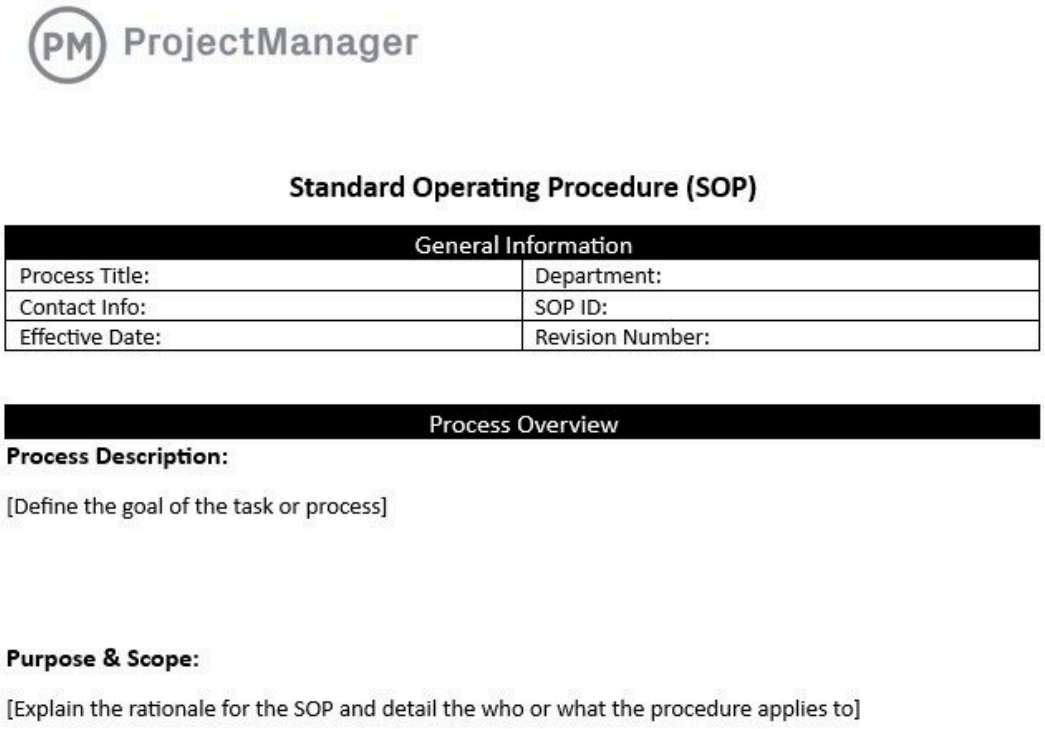

This gemba walk template structures those observations into clear improvement opportunities. It guides leaders through essential focus areas such as safety checks, adherence to standardized work, productivity flow and communication between shifts. Each category includes fields for recording what was seen, the action required, the responsible person and completion deadlines. By documenting both findings and follow-up tasks, the form ensures every walk leads to measurable progress toward safer, more efficient and better-organized factory operations.

Start free trial

13. Standard Operating Procedure Template

A standard operating procedure is a recurring activity that's part of the manufacturing process of a product. Standard operating procedures should be standardized and well-documented to ensure employee safety, comply with industry regulations and maintain quality standards.

15. Implementation Plan Template

Getting your manufacturing project off the ground involves turning an idea into a plan and then taking action. An implementation plan helps you create the steps that will lead to the manufacturing of your final product. Planning is key to delivering your product on time and within budget.

ProjectManager

Implementation Plan

Project	Project Manager	Stakeholders	Date Revised
[Name of project]	[Name of project manager]	[Names of primary stakeholders]	[Month, day, year updated]

	Monitoring and tracking	Ryan JJ.	25%						2 weeks	Management		$	
	Review	Ryan J.	25%						2 weeks	Management		$	

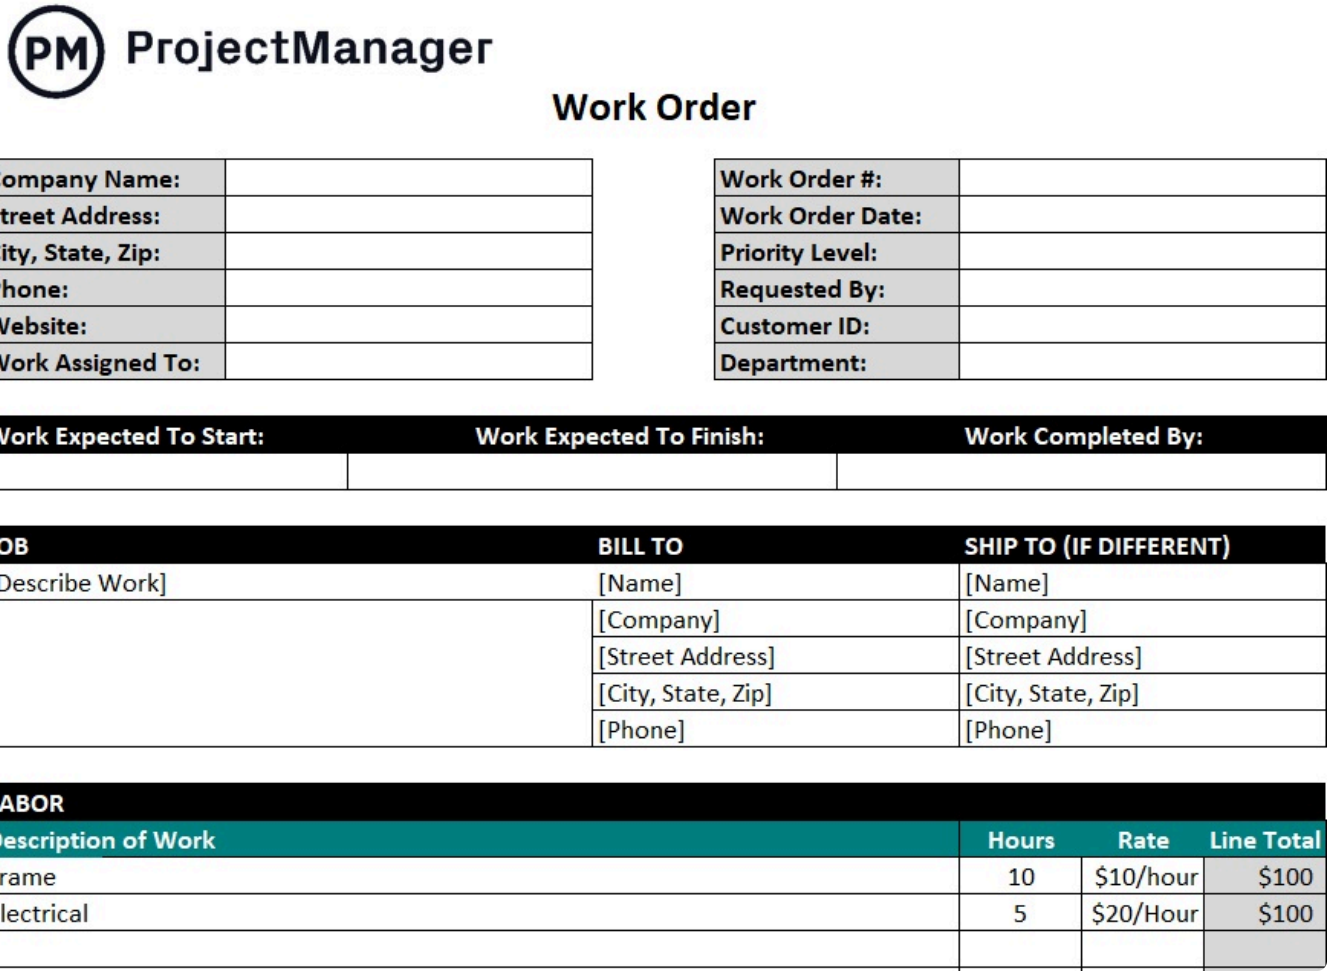

To do that, you can use our free implementation plan template for Excel. Our free template helps you define the strategy, process and actions necessary to create your final deliverable. The implementation plan template helps you turn your strategic plan into something real.

There are places to detail the manufacturing information, such as the manager, stakeholders, etc. The spreadsheet is divided into three, first where you show the strategy, then the process and finally the actions you'll take to fulfill that strategy. There's a timeline and planned hours, too, to estimate how long the work will take.

When you use our free project budget template for Excel you're able to cover all the financial bases, compare the costs and benefits of a project and help get a better return on your investment. There are spots to collect the labor and material costs, including planned and actual hours, dollars per hour, unit cost and more. There's also space for other line items to make sure your budget addresses all costs.

You'll also have a place to view the budget again the actual costs, with a column showing how much over or under budget you are. This is essential data if you want to deliver your manufacturing project under or at a budget to make or increase your profits.

18. Purchase Order Template

Sourcing materials or parts when manufacturing is one of the many factors you have to include in your planning. Having an effective purchase order pipeline helps to streamline your manufacturing and reduce issues. If issues arise, provide a paper trail to track them.

Start free trial

ProjectManager

Purchase Order

Delivery Date	Shipping Method	Shipping Terms
1/15/2022	Truck	Contents inspected on delivery

Payment Due Date	Payment terms
On delivery	After shipment quality has been approved

Item	Description	Quantity	Unit Price	Total Price
2x4	particle board	10	$3	$30
			Tax:	$5
			Total:	35

You can help achieve those goals with our free purchase order template for Excel. It helps you track delivery information, such as the name of the vendor you're working with, their contact information, shipping information as well as the date the goods are scheduled for delivery.

You'll also be able to list the inventory that you're purchasing. The items are broken down by name, description, quantity, and unit price and there's a line total so you're always clear on what you spending and what you're getting for those costs.

19. Risk Register Template

Risk is what might happen within your project, whether it's for the better or worse. Being able to identify what that could be and how you'll respond to it is risk management, which is how you keep to your manufacturing schedule.

Start free trial

Risk Tracking Template

Date of last review:

ProjectManager

ID	Description of Risk	Impact	Risk Reponse	Risk Level	Risk owner	Notes

19						

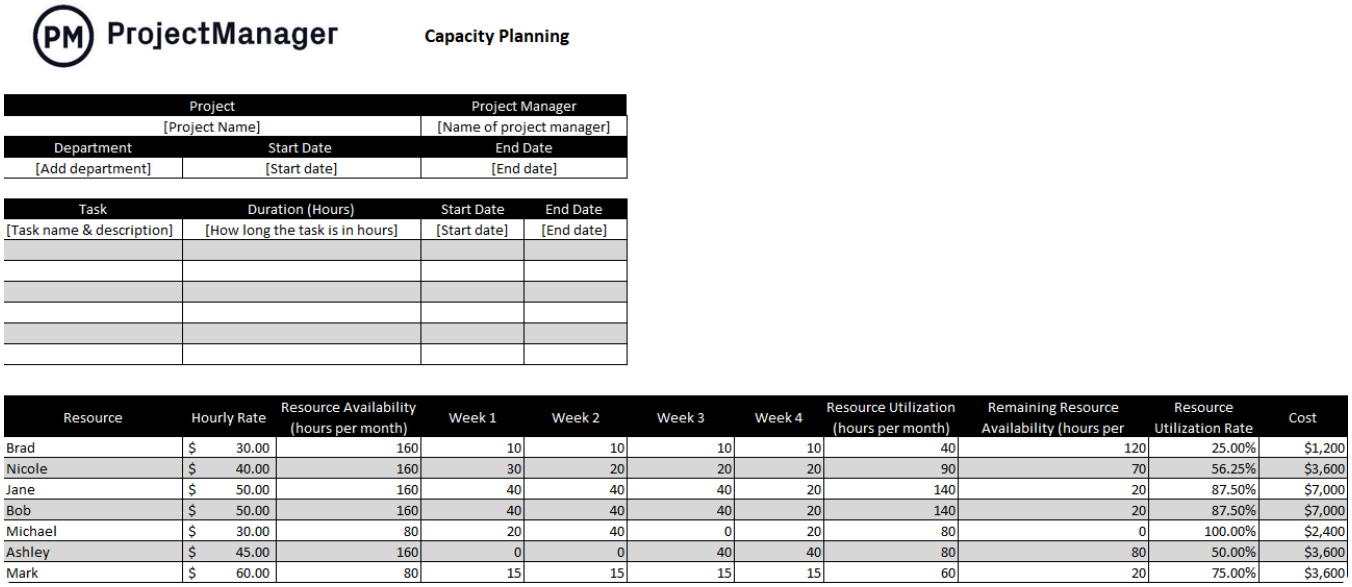

To capture all that data and have it on hand when you need it, there's our free risk register template for Excel. It identifies all the risks to your manufacturing process and describes what might happen and its impact. There's also a place to add risk response, note the level of risk and determine who's responsible for resolving it if it in fact occurs.

You'll want to set up your risk register template early in the planning stage and refer to it throughout the manufacturing cycle. Now you have a document that tells you what to do and even if you need to do something. Remember, not all risks are bad, they just impact manufacturing. Good risks can be taken advantage of, but you can't do a thing without our free risk register template for Excel.

20. Capacity Planning Template

One of the more important manufacturing Excel templates is this free capacity planning template for Excel. Capacity planning is the process of knowing the production capacity needed to meet demand. This is especially tricking as demand is always fluctuating.

Start free trial

ProjectManager

Capacity Planning

Mark	$ 60.00	80	15	15	15	15	60	20	75.00%	$3,600

Download this free manufacturing Excel template to understand the capacity of a manufacturer's maximum ability to produce a product over a specific period. This free template helps manufacturers create an effective production plan to meet future requirements.

The manufacturing template lists all the production tasks and their estimated duration, including start and end dates. It also lists resources and the hourly rate for each and then has a project timeline to schedule those resources. The manufacturing template helps with resource availability, utilization and more.

21. Quality Control Template

Quality control ensures that products produced in a facility meet the legal standards and customer requirements. Everyone in the manufacturing organizations must work together to create the best quality products possible. Using free manufacturing Excel templates helps achieve that goal.

ProjectManager

Quality Control

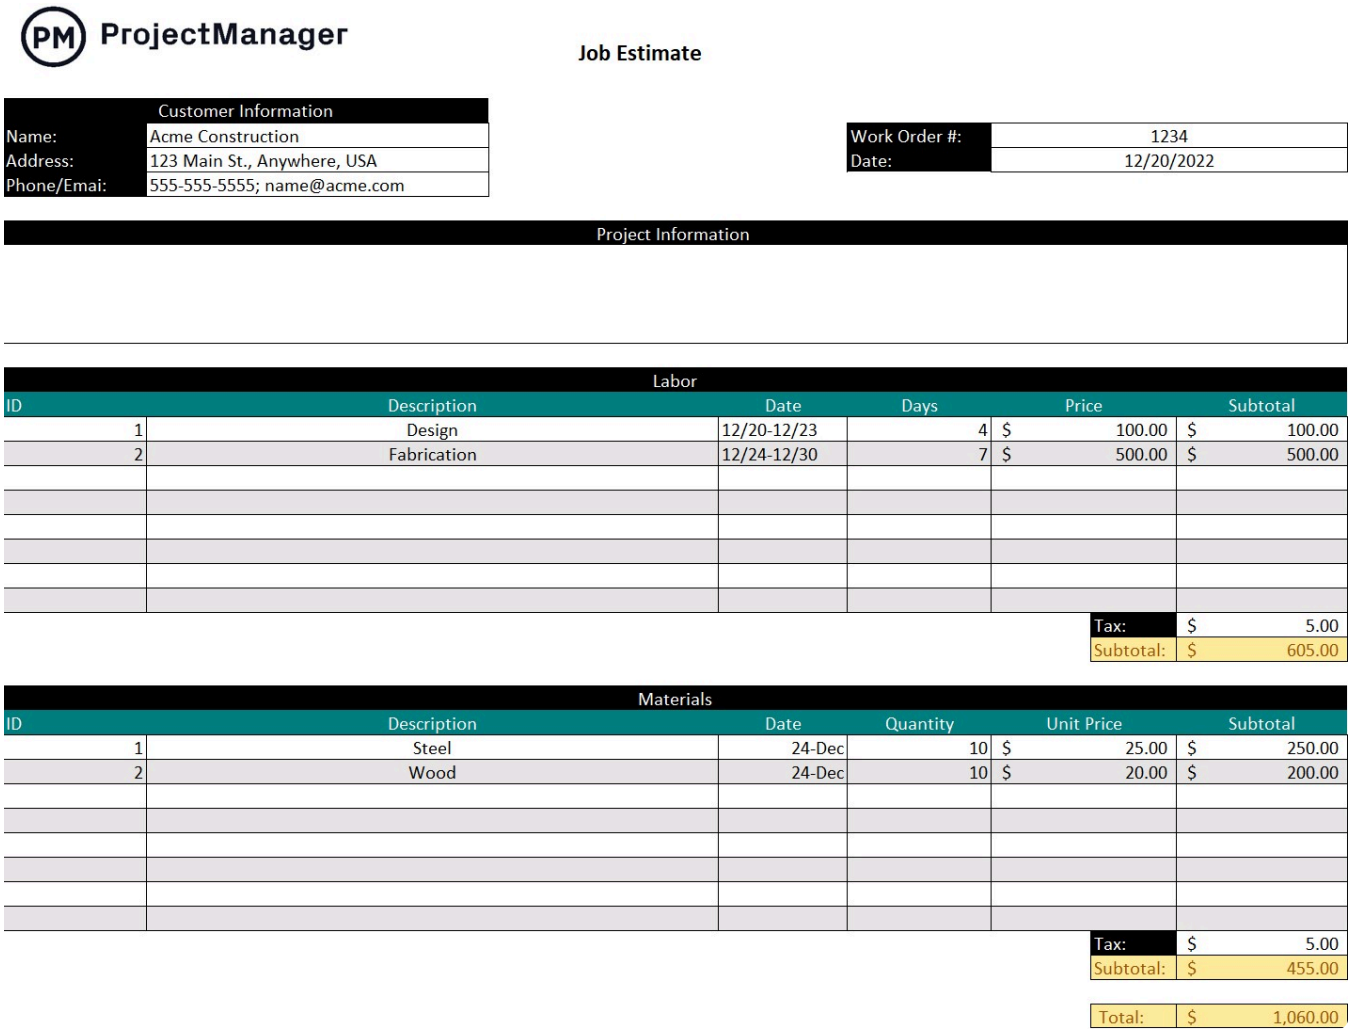

Issue	Description	Imperfections	Identified By	To Be Fixed By	Priority	Status	Date Opened	Date Closed	Notes
Installation	Not connecting as designed	10	Jeff T.	Sam R.	Critical	Open	5-Apr		
Functionality	Needs to work more seamlessly	3	Jeff T.	John P.	Low	Open	9-Apr		
Stress	Breaking under normal use	5	Jeff T.	John P.	Medium	Open	25-Mar		
Performance	Not meeting performance expectations	9	Margot S.	Sam R.	High	Closed	3-Apr	9-Apr	

Start free trial

This manufacturing Excel template lists issues and describes them and whatever imperfections there might be. It also shows who identified the issue, who is assigned to fix it and what the priority of the task is. There's a place for when the issue is opened or closed to help track its status.

22. Manufacturing Job Estimate Template

A job estimate in manufacturing is a document that covers what the workers on the production line will be responsible for. Beyond labor, it also identifies any materials needed and a cost estimate for the work. That's all covered in this free manufacturing job estimate template for Excel.

ProjectManager

Job Estimate

Customer Information	
Name:	Acme Construction
Address:	123 Main St., Anywhere, USA
Phone/Emai:	555-555-5555; name@acme.com

Work Order #:	1234

Tax:	$ 5.00
Subtotal:	$ 455.00

Total:	$ 1,060.00

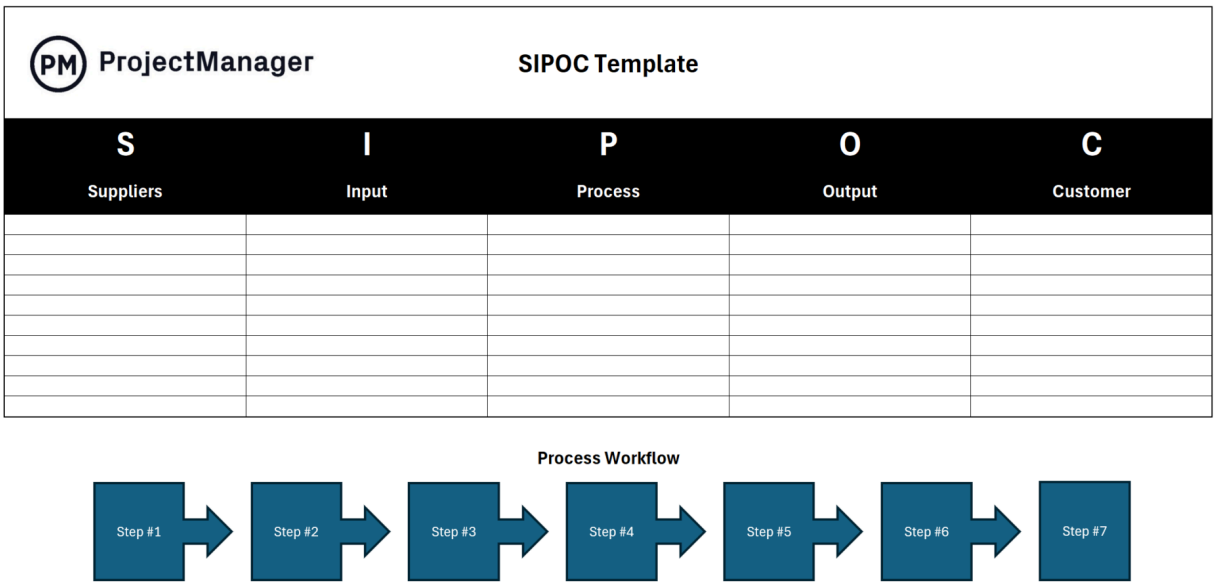

Of all the manufacturing Excel templates, this one is the most important for creating a budget by compiling accurate estimates of the cost and timeframe for completing production tasks. That doesn't mean the template is chiseled in stone. There must be some flexibility to respond to change

Start free trial

needed, the dates, duration, rate and finally a total. The other chart is for materials costs.

23. SIPOC Template

SIPOC stands for suppliers, inputs, process, outputs and customers. It's a visual tool used by manufacturers to document a process from start to finish. Manufacturers use this free SIPOC template for Excel before implementing a process to map it out and help managers make better decisions, help the production workers understand the process and keep the work continuously improving.

This is one of the Excel manufacturing templates that helps improve manufacturing processes by graphically showing all the elements of that process. The manufacturing template helps with onboarding, especially for new employees.

Because it's a high-level view of the process, including suppliers, inputs, outputs, costumes and so forth, it visualizes how everyone in the process receives materials and identifies areas of improvement to add production efficiency.

24. Asset Register Template

An asset register is a centralized record used to track physical assets throughout their lifecycle in manufacturing environments. It is commonly used to monitor equipment ownership, locations, financial values, maintenance responsibility and operational status to support inventory control and resource planning.

Start free trial

Asset Register Template

ProjectManager

Asset Identification											
Asset ID	Asset Name	Asset Category	Asset Description	Serial Number	Manufacturer	Model / Year	Location	Department	Custodian	Asset Status	Vendor / Supplier

Across manufacturing operations, keeping track of machinery, vehicles and production assets becomes harder as equipment moves between facilities and departments. This asset register template organizes identification details alongside procurement and financial information so teams can monitor where assets are located, who is responsible for them and how they are performing over time. By combining operational and cost-related data in one place, the template provides a practical way to manage equipment records and support budgeting decisions.

25. Vendor List Template

A vendor list is a centralized database used to document and manage supplier information in manufacturing environments. It is commonly used to track vendor relationships, purchasing details and contact information so procurement teams can maintain reliable sourcing and support production operations.

Vendor List Template

ProjectManager

Vendor Name	Vendor Category	Product or Service Provided	Vendor Rating (1-10)	Vendor Status	Tax ID / EIN / VAT number	Accepted Payment Methods	Payment Terms	Contract Value	Billing Address	Shipping Terms	Shipping Address	Primary Contact Name	Phone Number	Email Address	Vendor Location (HQ)	Contract Start	Contract End
Midwest Steel Supply	Raw Material Supplier	Structural steel sheets and coils	9	Active	84-3921045	Bank Transfer, ACH, Credit Card	Net 30	$ 145,000.00	1200 Industrial Rd, Gary, IN 46402	FOB Origin	1200 Industrial Rd, Gary, IN 46402	Robert Hayes	555-555-5555	sales@midweststeel.com	Chicago, IL, USA	1/15/25	1/14/27

payment terms, contract information and communication contacts. Having a single reference point helps teams quickly identify vendors and maintain stronger supplier management processes.

26. Vendor Scorecard Template

A vendor scorecard is a performance evaluation tool used to measure and compare supplier effectiveness in manufacturing environments. It is commonly used to assess quality, delivery performance, costs and compliance factors so organizations can make informed procurement and sourcing decisions.

Vendor Scorecard Template PM ProjectManager

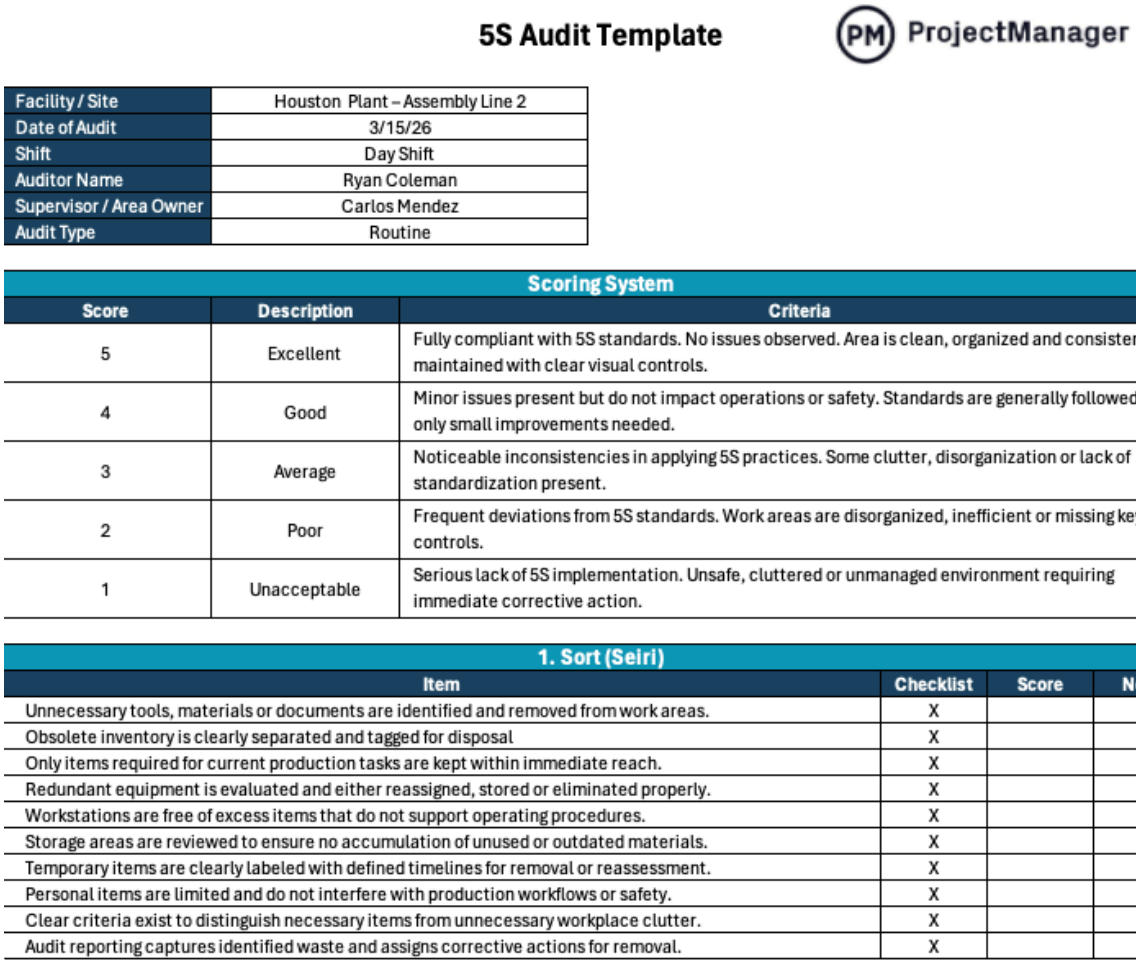

Vendor Identification				Evaluation Context				
Vendor Name	Vendor ID	Category	Contract / PO Number	Evaluation Period	Evaluator Name & Role	Project / Department	Spend (USD)	Criticality
Atlas Steel Co.	V-001	Materials	PO-78452	Q1 2026	Maria Lopez – Procurement	Commercial Build – Phase 2	$ 185,000.00	High
Prime Electric LLC	V-014	Subcontractor	CT-33219	Q1 2026	Kevin Jones – Project Manager	Residential Tower A	$ 92,500.00	High
SupplyHub Inc.	V-023	Services	PO-99871	Q1 2026	Laura Chen – Operations	Facilities Maintenance	$ 41,200.00	Medium

Performance Scoring				
Category	Sub-Metric	Atlas Steel Co.	Prime Electric LLC	SupplyHub Inc.
Quality	Conformance to specs	5	4	4
	Defect rate / rework	4	3	5
	Inspection pass rate	5	4	4
	Documentation accuracy	4	3	5
Average Score		4.5	3.5	4.5
Delivery / Schedule	On-time delivery %	4	3	5
	Lead time reliability	4	3	4
	Responsiveness to changes	5	4	4
	Backorder frequency	3	4	5
Average Score		4	3.5	4.5
Cost & Commercial	Price competitiveness	3	4	5
	Cost stability	4	3	5
	Invoice accuracy	5	4	5
	Value for money	4	4	5
Average Score		4	3.75	5
Service & Communication	Responsiveness	5	4	5
	Issue resolution speed	4	3	5
	Proactiveness	5	3	4
	Clarity of communication	4	4	5
Average Score		4.5	3.5	4.75
Compliance & Risk	Safety compliance	5	4	5
	Regulatory compliance	5	4	5
	Contract adherence	4	3	5
	Insurance / certifications	5	4	5
Average Score		4.75	3.75	5

Once supplier relationships are established, manufacturers need a consistent way to determine which vendors are meeting expectations. This vendor scorecard template organizes evaluation categories and performance metrics into a structured scoring system that allows teams to compare vendors across multiple criteria. The format helps reveal trends, identify weak areas and support future purchasing decisions based on measurable performance data.

Start free trial

A 5S audit is a workplace evaluation process used to measure organization and standardization practices in manufacturing environments. It is commonly used to assess work areas against lean principles that improve cleanliness, reduce waste and maintain consistent operational conditions across production facilities.

5S Audit Template ProjectManager

Facility / Site	Houston Plant – Assembly Line 2
Date of Audit	3/15/26
Shift	Day Shift
Auditor Name	Ryan Coleman
Supervisor / Area Owner	Carlos Mendez
Audit Type	Routine

Scoring System		
Score	**Description**	**Criteria**
5	Excellent	Fully compliant with 5S standards. No issues observed. Area is clean, organized and consistently maintained with clear visual controls.
4	Good	Minor issues present but do not impact operations or safety. Standards are generally followed with only small improvements needed.
3	Average	Noticeable inconsistencies in applying 5S practices. Some clutter, disorganization or lack of standardization present.
2	Poor	Frequent deviations from 5S standards. Work areas are disorganized, inefficient or missing key controls.
1	Unacceptable	Serious lack of 5S implementation. Unsafe, cluttered or unmanaged environment requiring immediate corrective action.

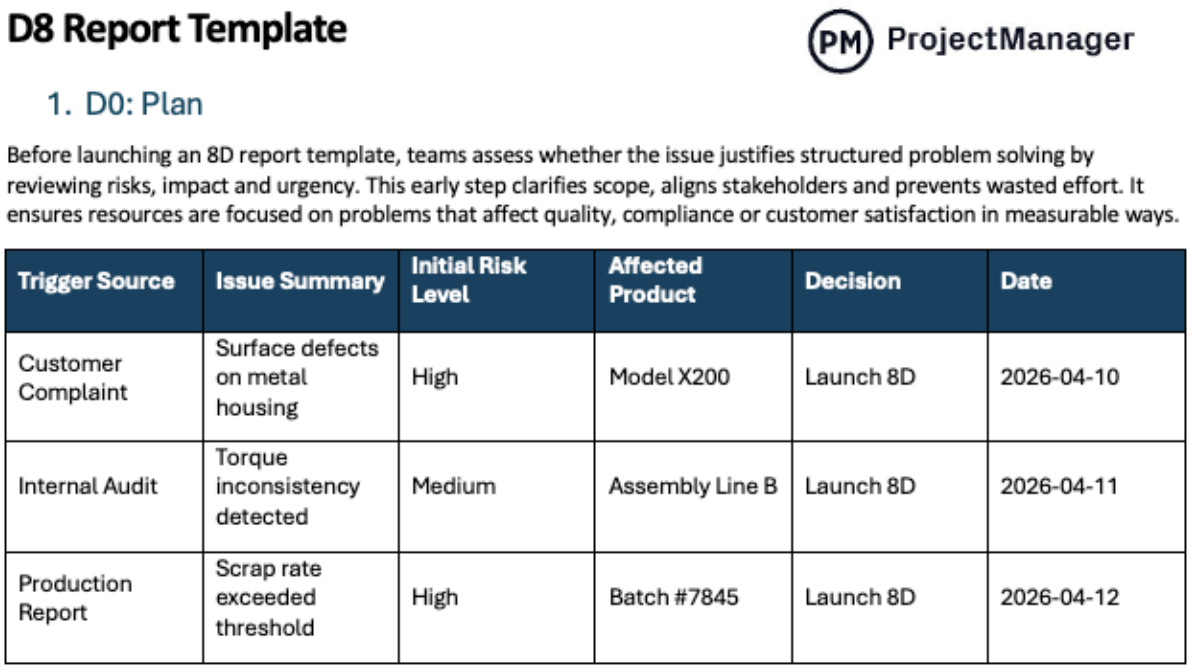

1. Sort (Seiri)			
Item	**Checklist**	**Score**	**Notes**
Unnecessary tools, materials or documents are identified and removed from work areas.	X		
Obsolete inventory is clearly separated and tagged for disposal	X		
Only items required for current production tasks are kept within immediate reach.	X		
Redundant equipment is evaluated and either reassigned, stored or eliminated properly.	X		
Workstations are free of excess items that do not support operating procedures.	X		
Storage areas are reviewed to ensure no accumulation of unused or outdated materials.	X		
Temporary items are clearly labeled with defined timelines for removal or reassessment.	X		
Personal items are limited and do not interfere with production workflows or safety.	X		
Clear criteria exist to distinguish necessary items from unnecessary workplace clutter.	X		
Audit reporting captures identified waste and assigns corrective actions for removal.	X		

Daily production activities can slowly introduce clutter, inconsistent procedures and inefficient workstation layouts that affect output. This 5S audit template guides teams through structured evaluations using the five lean categories and built-in scoring criteria. Auditors review checklist items, assign ratings and document observations to identify weak areas, compare performance across workspaces and track improvement efforts over time.

28. 8D Report Template

An 8D report is a structured problem-solving document used to identify, correct and prevent recurring issues in manufacturing environments. It is commonly used by quality, engineering and operations teams to investigate defects, determine root causes and

Start free trial

D8 Report Template

ProjectManager

1. D0: Plan

Before launching an 8D report template, teams assess whether the issue justifies structured problem solving by reviewing risks, impact and urgency. This early step clarifies scope, aligns stakeholders and prevents wasted effort. It ensures resources are focused on problems that affect quality, compliance or customer satisfaction in measurable ways.

Trigger Source	Issue Summary	Initial Risk Level	Affected Product	Decision	Date
Customer Complaint	Surface defects on metal housing	High	Model X200	Launch 8D	2026-04-10
Internal Audit	Torque inconsistency detected	Medium	Assembly Line B	Launch 8D	2026-04-11
Production Report	Scrap rate exceeded threshold	High	Batch #7845	Launch 8D	2026-04-12

Production issues rarely disappear by fixing symptoms alone, especially when defects affect quality, customer requirements or compliance standards. This 8D report template walks teams through a step-by-step resolution process that begins with issue planning and team formation before moving into root cause analysis, corrective actions and prevention measures. The structured format creates a documented path from initial problem identification through long-term resolution and process improvement.

29. Maintenance Request Form Template

A maintenance request form is a document used to report equipment problems, service needs or repair requirements in manufacturing environments. It is commonly used to capture maintenance information, prioritize work and coordinate repair activities that reduce downtime and support production continuity.

Start free trial

Maintenance Request Form Template

ProjectManager

1. Requester Information

Requester information is the identifying section of a maintenance request form that shows who reported the issue, characterized by names, departments and contact details that support communication and accountability. It matters because maintenance teams often need clarification, updates or access coordination before work can begin and move forward without delays.

Name	Department / Unit	Contact Info
Sondra Williams	Operations	sondra_williams@example.com | (555) 123-4567
Mario Lopez	Facilities	mario.lopez@example.com | (555) 987-6543

2. Request Details

Request details are the tracking fields of a maintenance request form that document when the issue was submitted and what type of work is needed, characterized by identifiers, dates and request categories. These fields matter because they help teams sort, prioritize and manage repair, inspection, preventive and emergency work more consistently.

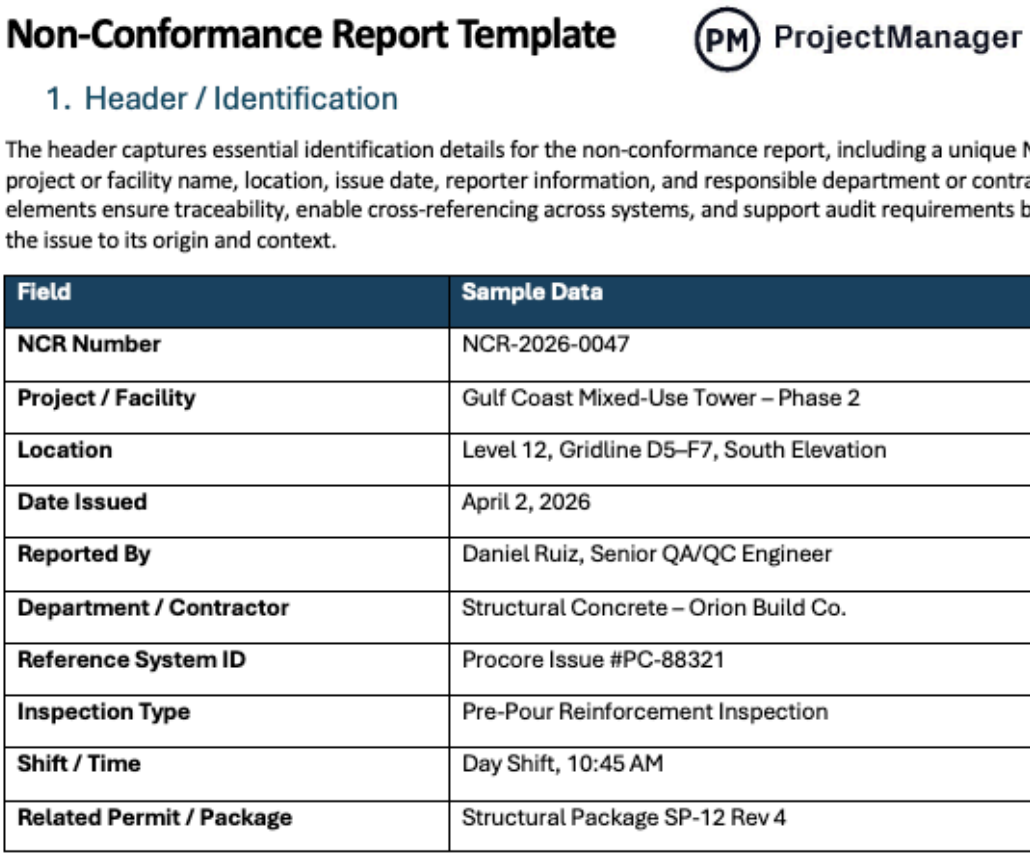

Request ID	Date Submitted	Type of Request	Description
MR-001245	2026-04-01	Repair	HVAC unit not cooling properly, causing temperature inconsistencies in office areas.
MR-001246	2026-04-02	Preventive	Scheduled inspection and servicing of conveyor system to prevent unexpected mechanical failures.

Equipment failures can quickly disrupt production schedules when issues are reported informally or important details are missing. This maintenance request form template organizes information into structured sections covering requester details, equipment information, issue descriptions and urgency levels. The layout guides users through documenting problems consistently so maintenance teams can evaluate requests, assign work and respond with the right actions faster.

30. Non-Conformance Report Template

A non-conformance report is a quality management document used to record products, materials or processes that fail to meet defined manufacturing requirements. It is commonly used to document defects, track investigations and manage corrective actions that restore compliance with quality standards.

Start free trial

Non-Conformance Report Template

ProjectManager

1. Header / Identification

The header captures essential identification details for the non-conformance report, including a unique NCR number, project or facility name, location, issue date, reporter information, and responsible department or contractor. These elements ensure traceability, enable cross-referencing across systems, and support audit requirements by clearly linking the issue to its origin and context.

Field	Sample Data
NCR Number	NCR-2026-0047
Project / Facility	Gulf Coast Mixed-Use Tower – Phase 2
Location	Level 12, Gridline D5–F7, South Elevation
Date Issued	April 2, 2026
Reported By	Daniel Ruiz, Senior QA/QC Engineer
Department / Contractor	Structural Concrete – Orion Build Co.
Reference System ID	Procore Issue #PC-88321
Inspection Type	Pre-Pour Reinforcement Inspection
Shift / Time	Day Shift, 10:45 AM
Related Permit / Package	Structural Package SP-12 Rev 4

Defects and process deviations become harder to control when findings are scattered across emails or verbal discussions. This non-conformance report template provides a structured workflow that begins with issue identification and classification before moving through containment, root cause analysis and corrective actions. The format creates clear accountability while maintaining traceable records that support audits, quality reviews and continuous improvement efforts.

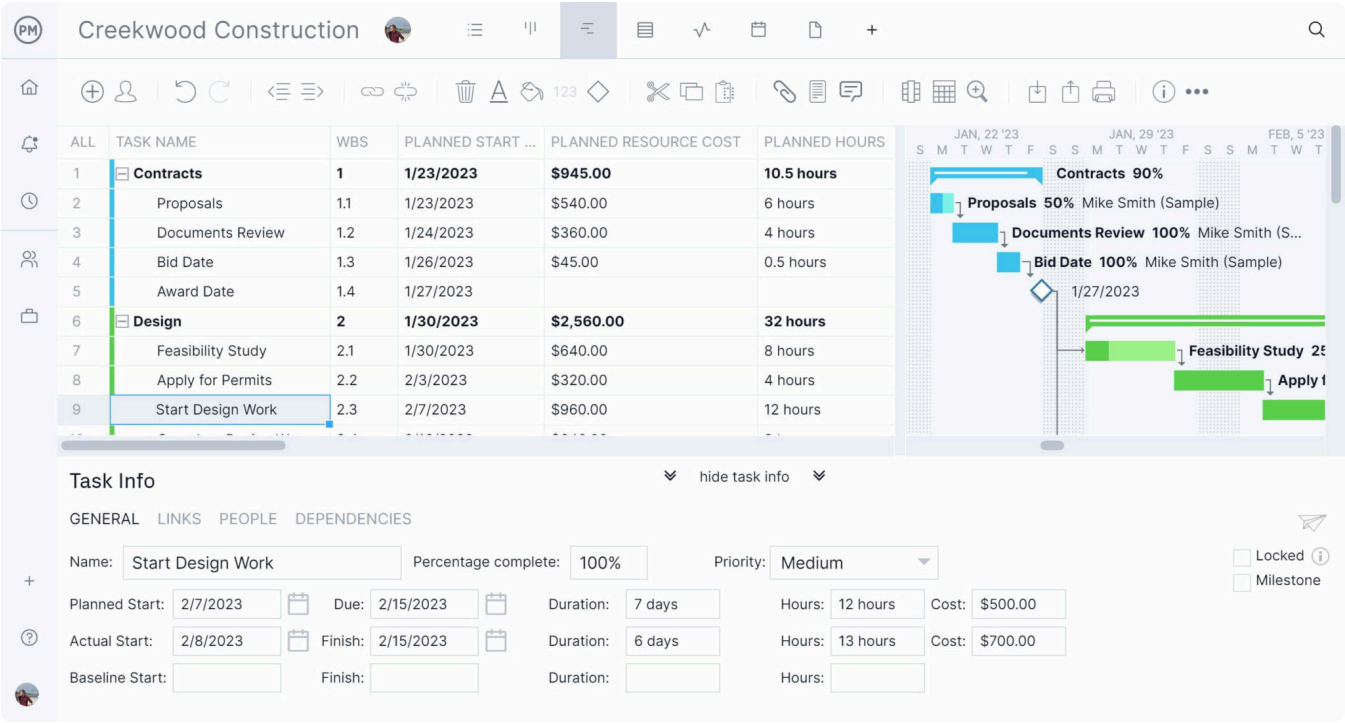

Get More Than Templates Can Provide With ProjectManager

We encourage you to download every template on this list. Go to our site and look over the dozens more project management templates we have to help manage your work. But templates can only go so far. They're static documents and require manual updates to be effective.

ProjectManager is software that delivers real-time data for more insightful decision-making. We have features that work together in ways that templates can't. From task management and risk management to resource management, we've got you covered.

Start free trial

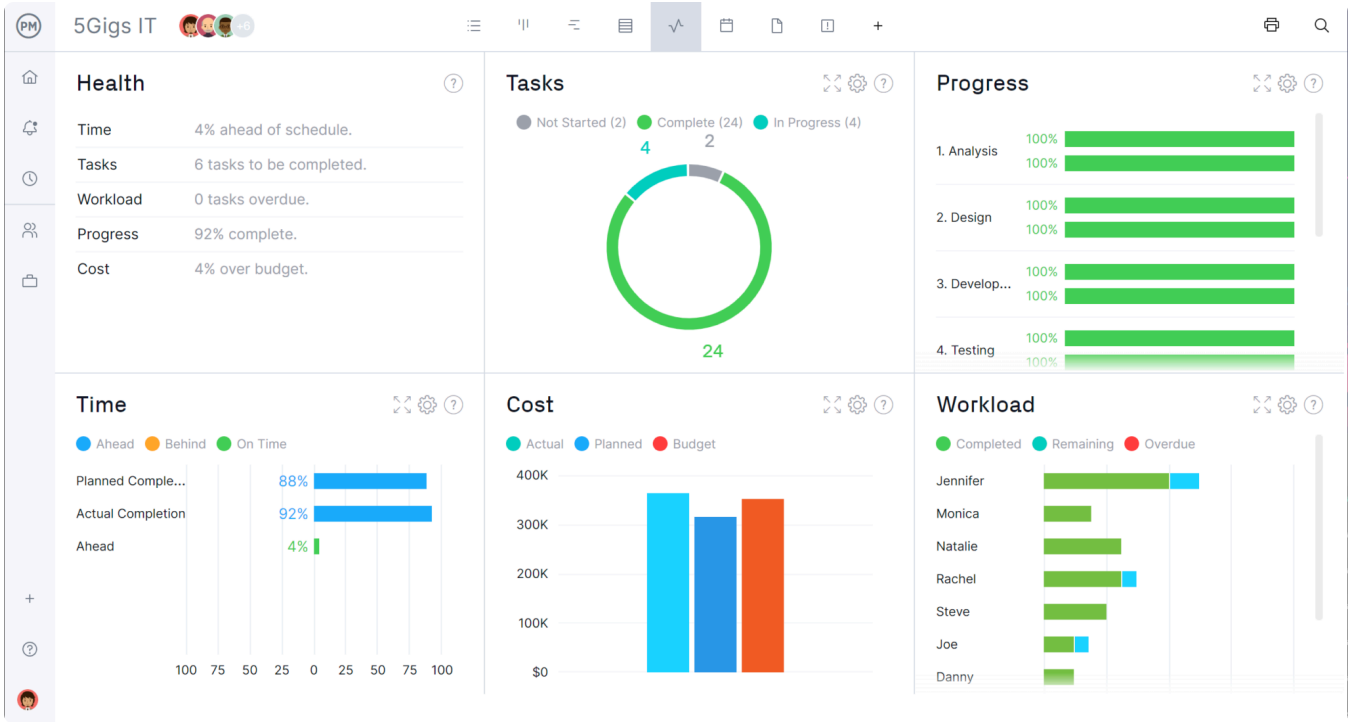

Instead of a static Gantt chart template, plan on our online Gantt chart. You can organize your tasks, assign team members and even link dependent tasks to avoid delays. More than that, you can even filter for the critical path without any lengthy calculations. Once you set the baseline, you've captured your planned effort and can compare it to your actual effort in real time. Your teams can see the same information across our multiple project views, such as list, calendar and sheet views or kanban board to visually track your workflow.

Track Progress and Performace With Real-Time Dashboards

To make sure you're progressing as planned, you need a tool that gives you a high-level view of the manufacturing process. Our real-time dashboards do just that. They automatically collect live project data and display them in easy-to-read graphs and charts. That way, you can see your costs, time, tasks, workload and more when you need to. There's no setup necessary, and customizable reporting tools give you more detail when you need it. Then share these reports with stakeholders to keep them updated.

Start free trial

That's only a short tour of some of our features. Manufacturers love our automation, which allows you to set as many triggers as you need that will result in a specific action. That frees up your team to focus on more important work. Managers can create task approvals to make sure nothing slips past them and quality is ensured. There are even recurring tasks. We streamline manufacturing and give you more control to deliver success.

Related Excel Project Management Content

While Excel is not a project management software, it can still be very helpful for managing various aspects of your projects. That's why we've created dozens of blogs, templates and guides to help you use Excel for project management.
